TECHNICAL SOLUTIONS ENGINEER

Cloud Data Platforms | AI Integration | Customer-Facing Delivery | Python | SQL

CORE SKILLS

- **Languages & Query:** Python, SQL, Bash, JavaScript
 - **Cloud & Platforms:** AWS (Lambda, S3, IAM), GCP (BigQuery, Cloud SQL), Snowflake, Databricks, Spark SQL
 - **AI & LLM Integration:** Snowflake Cortex, Anthropic API, OpenAI API, RAG patterns, prompt engineering, semantic modeling for natural-language analytics
 - **Integration & APIs:** REST APIs, Postman, Flask, FastAPI, webhooks, OAuth
 - **DevOps & Observability:** Docker, Kubernetes, GitHub Actions, Grafana, Prometheus, Kafka, dbt, CI/CD
 - **Customer-Facing & BI:** Power BI, Tableau, technical documentation, runbook authoring
-

PROFESSIONAL EXPERIENCE

Data Engineer, AMD | Austin, TX

2025 – Present

- Shipped Snowflake Cortex conversational analytics tool to 30+ Finance and HR executives, partnering with leadership to define semantic model and validate query accuracy
- Cut report latency 40% and Snowflake compute spend 20% across 15+ production workloads through query tuning and aggregated fact tables, saving ~\$80K annually
- Designed Power BI executive dashboards on a star schema semantic layer adopted by 12 VPs for weekly headcount and budget decisions, retiring manual legacy reports
- Snowflake architecture SME for Finance and HR analytics; defined 20+ KPIs with leadership and eliminated 60% of ad-hoc reporting requests

Software Engineer - Specialist, Charles Schwab | Westlake, TX

2023 – 2025

- Became the SME for GCP migration patterns by supporting 5+ partner teams through Teams office hours, ad-hoc troubleshooting, and direct enablement during their on-prem to GCP cutovers
- Architected automated BigQuery and Cloud SQL validation pipeline that improved query performance 50% and became the org-wide data quality standard
- Authored migration runbooks and technical documentation for on-premises to GCP data platform migration, referenced by partner teams companywide for their own cloud migrations
- Shipped Grafana and Prometheus observability dashboards backed by Kafka metrics across 25+ apps and services, reducing mean detection time 20%
- Led CI/CD migration from Bamboo to GitHub Actions across organization with zero cutover incidents, cutting deployment times by 40%

Network Reliability Engineer, Adobe | San Jose, CA

2022 - 2023

- Identified expiring TLS certificates as top reliability bottleneck across 200+ services; shipped serverless AWS renewal pipeline (Lambda, S3, Python/Flask) achieving 99.9% uptime and cutting manual toil 90%
 - Built a Python validation script that caught malformed and expiring certificates pre-deployment, freeing engineering teams to focus on higher-priority reliability work
-

PROJECTS

Cedar & Pine Home Co. – dbt Cloud Project | github.com/tzdwekat/cedar-pine-dbt

2026

- Built and pitched a full customer-facing dbt Cloud implementation for a simulated Commercial-tier prospect, modeling the exact discovery-to-rollout motion an SE runs in the field: pain narrative, feature-to-pain mapping, ROI justification, and 60-day deployment plan
 - Designed the architecture to demonstrate three product pillars (Slim CI, Semantic Layer, testing and lineage) against a realistic customer pain narrative, including 17 data tests, a semantic model with ratio metrics, and discovery-driven feature-to-pain mapping
-

EDUCATION

North Carolina State University | B.S. in Computer Engineering | Raleigh, NC

2022

CERTIFICATIONS & COURSES

- Google Certified Associate Cloud Engineer, Fast.AI: Practical Deep Learning for Coders
